Lab 4: CSS Design and Layout

Complete Web Page

Exercises for Today:

Exercise 1: Arrange Your Page into Sections (roughly 100 minutes)

The first task is to organize index.html by adding ids, classes, spans and divs as seen in the lecture. Then, add "boxes" around these sections of the website by adding to your style.

- Use one of the CSS layout techniques to position elements on the page (display, float, flexbox, or grids)
- Use a single external CSS stylesheet to style all pages
- Use the images provided to construct the appropriate elements on the page:
 - the iPhone
 - App Store and Google Play buttons
 - Instagram Logo
 - Login button

Exercise 2: Upload your site to your git account (roughly 10 minutes)

Send your site url within your solution and upload all to the moodle.
